

Identify & Compare Attributes

Identify and compare attributes of objects and events — length, capacity, mass and duration — using direct comparisons and explaining your reasoning.

Identify

Name the attribute — length, capacity, mass or how long it takes.

Compare

Line objects up and compare directly — longer, holds more, heavier.

Explain

Say how you know — “it is longer because it reaches further.”

Compare directly — line up at one end: which pencil is longer?

same start

“The top pencil is longer — it reaches further than the bottom one.”

Modelling routine

1 I do

Line up two pencils at one end and name which is longer.

2 We do

Compare two cups by pouring — which one holds more?

3 You do

Students compare two objects and explain how they know.
