

Play & Recognise Numbers

Play instructive card games — memory and matching games with dot cards — to recognise numbers shown in different arrangements, then use subitising to compare collections and say who has more.

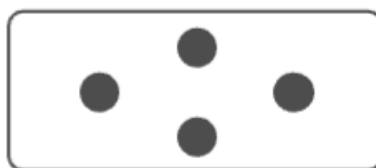

The same four, arranged differently

square

a row

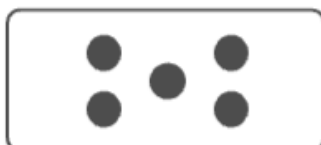

a diamond

Different pictures, same number — recognise four each time.

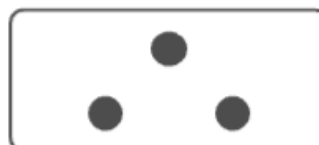

SPOTLIGHT

Subitise to compare and share

Subitising means knowing how many at a glance, without counting. Peek at each card, name the amount, then compare to say who has more when sharing.

five

three

Memory match

Turn cards face down; find pairs that show the same number.

Matching pairs

Match two dot cards that show the same amount, arranged differently.

Share & compare

Deal cards, subitise each, then say who has more.
