

Start, Stop and Change Direction

How a push or a pull changes how things move

Start Moving

Change Direction

Give it a Push

Give it a Pull

CAN YOU SPOT?

Look at each picture. Does the push or pull make the object start, stop, or change direction? Which way is it moving now?

TEACHER GUIDE **Big idea:** A push or a pull can make an object start moving, stop moving, or change the direction it is travelling. A still object needs a push or a pull to start. A moving object needs a push or a pull to stop it or send it a new way.
Ask: Is the object starting, stopping, or changing direction? What push or pull made it happen? Which way is it moving now?
