

Forces All Around Us

Everyday objects we push and pull

Playground

Toys

Windows

Doors

CAN YOU SPOT?

Look at each object. Is a push or a pull moving it? Is the force strong or gentle, and which way does it go?

TEACHER GUIDE **Big idea:** We move everyday objects with pushes and pulls — playground swings and slides, our toys, and windows and doors. Every time an object moves, a push or a pull (a force) makes it happen. A bigger force moves it more.

Ask: What are you moving — a swing, a toy, a window or a door? Are you pushing or pulling? Is the force strong or gentle? Which way does the object move?
