

Predicting What Plants Need

Making plant predictions

Water

We predict a plant will wilt if it has no water.

Sunlight

We predict a plant grows well in the light.

Air and soil

We predict roots need soil to hold and feed the plant.

Test it

We watch two plants to check our prediction.

TEACHER TALK - PLANT PREDICTIONS

Model a prediction: 'I think a plant will die if it doesn't get enough water.' Set up two plants and check over the week.
